

Lecture Homework Week 06 - Tuesday

Student Information

Name: Samantha Placito Melendrez

NetID: Splac006

Student Responses

Answer the following questions, and be sure to highlight them when you turn them in on Gradescope

Problem 1

For part (1), below answer why the program does not work when you comment out the line `BL copy_vector`:

- When we comment out **BL copy_vector** it doesn't work because our vector table won't be copied to its address which means that when the ARM processor is looking for the interrupt vectors, it won't be able to find them since it isn't in the correct address, thus causing the program to fail.

For part (2), below answer why moving the vector table to the beginning of the start.s file still works after recompiling:

- When we move the vector table to the beginning of the file, we are basically placing our vector into the memory location it's supposed to go in. By changing the entry point, we are allowing the processor to find the vector without depending on **BL copy_vector**.
